QUOPS capability on a nearest-neighbor array, one week
$p = 0.001$
$p = 0.0001$
QUOPS score (largest passing size s)
Available physical qubits Q
FeMoco target
RSA-2048 target
Helios-1 (measured)
Willow (measured)
Physical qubits
STAR
FTQC
standard threshold
1/γ² throughput scenario
FTQC with a 100× better T source
Standard: mean polarization ≥ 1/√e. Dashed: declared scenario in which a 1/γ² throughput penalty must fit in one week.
Routing and lattice-surgery timing are declared models; measured scores are at each device's own error rates.
