Variance alone does not certify mitigation
Raw
Number selection
Trained affine
Selection + training
PEC inverse-norm reference
Measured log[F_{variance}]
Pauli exposure χ_{PEC}
Same exposure, different residual bias
Measured held-out bias
Pauli exposure χ_{PEC}
STAR generator-fault submodel
$q/(p|\theta|)$
d=9, raw
d=9, ideal PCEC
d=9, noisy PCEC
d=25, raw
d=25, ideal PCEC
d=25, noisy PCEC
Angle $|\theta|$
