Capacity sensitivity to the finite-patch accuracy model
τ = 1, ε = 0.001
τ = 2, ε = 0.001
τ = 4, ε = 0.001
τ = 1, ε = 0.01
τ = 2, ε = 0.01
τ = 4, ε = 0.01
NISQ effective
NISQ PEC (2q)
NISQ compiled PEC
STAR
Hybrid
FTQC
Largest modeled side L (L × L sites)
Available physical qubits, Q
3 × 3 planning reference
Envelope including 4 × 3 and 4 × 4
One week · p = 10⁻³ · same reference delivery and source menu · budgets reoptimized · sparse L grid to 48
L = 2 retains its own calibration. Larger-L transfer and NISQ residual-bias affordability remain assumptions.
