
Fixed τ = 1 implementation benchmark: capacity after the optimization round
$p = 0.001$, $\varepsilon = 0.01$
$p = 0.0001$, $\varepsilon = 0.01$
$p = 0.001$, $\varepsilon = 0.001$
$p = 0.0001$, $\varepsilon = 0.001$
Largest lattice side L
Available physical qubits Q
Available physical qubits Q
STAR · all five changes
Hybrid · all five changes
FTQC · all five changes
NISQ: assumed effective mitigation
NISQ: two-qubit PEC reference
Same arm · integrated_v1 menu
STAR/hybrid zero-growth sensitivity
One week · capacity is the largest tested even L within Q · bands are scenarios, not confidence intervals.
Lanes, ports and transfers are declared delivery models; NISQ effective bias is assumed. Interacting bulk convergence is not established.
