The same sea of physical qubits, allocated in three ways

NISQ

Physical circuits + repeated sampling

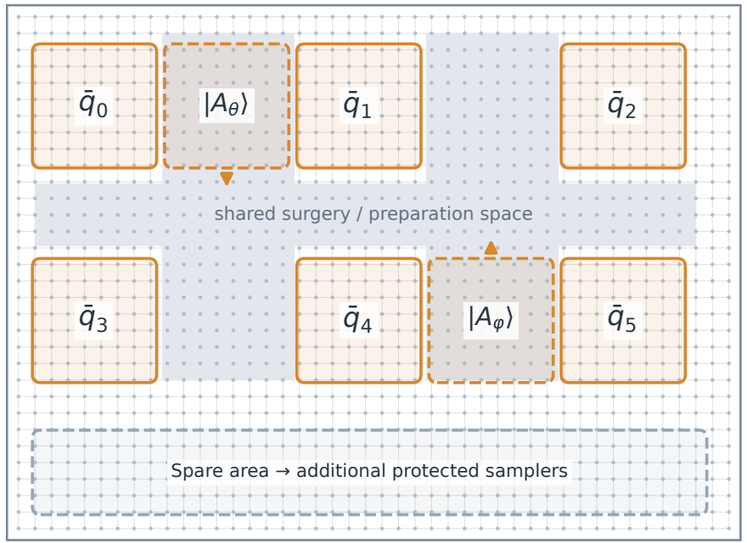

Prepare → evolve → measure

Pool shots; select and mitigate

STAR

Protected Clifford gates + analog rotations

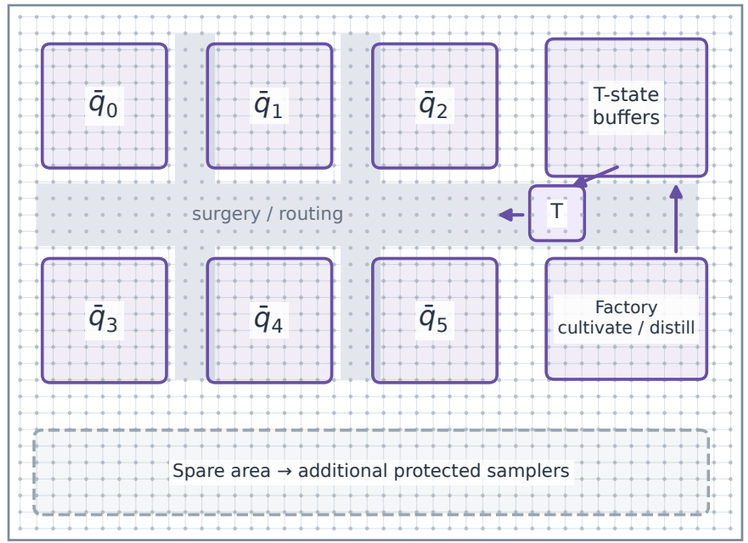

Temporary angle-state preparation

Mitigate residual analog errors

FTQC

Protected gates + high-fidelity magic states

Logical patches + magic-state supply

Synthesize rotations; budget logical faults

Dots: physical qubits · Gray corridors: operation space · Colored outlines: resource groups · Schematic allocations, not optimized floorplans
